

6SNT.ADIF-HUB

Beta validation kit

Plan, profiles, interview script, feedback form and matrix for closed beta.

Diseñado y desarrollado por Luis Soto, CA6SNT, Valdivia, Region de los Rios, Chile-FF30

Captura de la aplicacion

Vista generada desde la app local con selector ES/EN visible.

Beta validation plan

Goal

Validate whether 6SNT.ADIF-HUB helps real operators clean, deduplicate and export logs while keeping control of their data.

Scope

Closed beta with 10 to 20 operators over 2 to 4 weeks. This document does not contact users and does not publish in communities.

Entry criteria

- Local app installer or executable available.
- Minimum ES/EN documentation ready.

- Sanitized fixtures for internal tests.
- Clear backup warning.

Success criteria

- Operators complete import, mapping, dedupe and export.
- Declared confidence is enough to review the generated ADI.
- Reproducible errors are documented with sanitized data.
- No uncontrolled privacy risks appear.

Blocking criteria

- Corrupted ADIF export.
- Record loss without warning.
- Ambiguous conflict resolution.
- UI prevents review before export.
- Unsafe handling of real logs or SQLite databases.

Metrics

- Formats tested.
- Approximate QSOs per batch.
- Time to first export.
- Number of conflicts and manual decisions.
- Confidence level from 1 to 5.
- Errors by area.

Target operator profiles

Priority profiles

- Operators with large historical logs.
- Contesters exporting `Cabrillo`.
- Users of N1MM, Log4OM, DXKeeper, HAMRS or other loggers.
- POTA/SOTA activators.
- Operators keeping part of their log in Excel.
- Users concerned about privacy and local control.

Selection criteria

Seek diversity of formats and workflows, not only expert users. The beta should include people who can explain why they would or would not trust the final export.

Temporary exclusions

- Users needing direct cloud sync.
- Operators looking for a live logger.
- Flows that require CAT, PTT or transmission.

Interview script

Before use

- What logger or tools do you use today?
- Where do your logs get scattered?
- What formats do you normally export?
- What worries you before uploading to LoTW/eQSL/ClubLog?

During the test

- Which part of the flow is clear?
- Where do you hesitate before moving on?
- Does the mapper give enough control?
- Does preview help catch errors?
- Are conflicts understandable?

After export

- Would you review this `ADI` before uploading?
- What would make you trust it more?
- Which format or case was missing?
- Did you see any data you did not expect?

Future payment without sales pressure

- If this matures, what value would it have for you?
- Would you prefer a local one-time app, donation, simple license or another model?
- What technical condition would be mandatory before paying or recommending?

Feedback form

Non-sensitive data

- Operating system:
- App version:
- Main logger:
- Formats tested:
- Approximate QSO count:
- Activity type: general / contest / POTA / SOTA / digital / mixed

Result

- Imported files: yes / no
- Mapped columns: yes / no / not applicable
- Normalized: yes / no
- Deduplicated: yes / no
- Resolved conflicts: yes / no / none
- Exported ADI : yes / no

Rating 1-5

- UI clarity:
- Documentation clarity:
- Export confidence:
- Control over conflicts:
- Willingness to recommend:

Errors found

Describe the error without private data. If possible, attach a minimal sanitized file.

Comments

What should change before a public beta?

Feedback matrix

Severity

Severity	Description	Action
Blocker	Prevents import, review or export	Fix before beta continues
Critical	Risk of wrong data or lost trust	High priority
Important	Affects frequent flow but has workaround	Plan during beta
Improvement	Improves clarity or efficiency	Group by theme
Future idea	Outside current MVP	Record without promising

Area

Area	Classification question
Ingest	Does the file enter and get identified correctly?
Mapping	Are columns assigned clearly?
Normalization	Are ADIF fields consistent?
Deduplication	Do detected duplicates make sense?
Conflicts	Is the manual decision clear and reversible?
Export	Is the final ADI useful and reviewable?
Documentation	Does the operator know what to do?
Installation	Does the app start without excessive friction?
Language	Are ES/EN clear for the operator?
